

New in [Tiki18](#)

Introduction

PluginPDFpage is another wiki plugin for [mPDF](#). Its function is to customize page settings for PDF output of any specific page (also works over multiple pages).

[PluginPDF](#) sets parameters for the wiki page, while PluginPDFpage changes the parameters just for a specific blob of text.

An example of usage is to switch from portrait to landscape for one large table, and to change back after the table.

Plugin Parameters

Insert page with new settings in PDF

Introduced in Tiki 18.

[Go to the source code](#)

Preferences required: `wikiplugin_pdfpage`

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Page Content		
<code>footer</code>		Possible values: <code>HTML / Wiki Syntax / Plain text</code> , <code>1</code> , <code>{DATE j-m-Y}</code> . For example: <code>{PAGETITLE} Center Text 1</code> , <code>Page 1 of {NB}</code> , . Set footer value as <code>off</code> , to remove footer from page		
<code>pagesize</code>	(blank) Letter Legal Tabloid/Ledger A0 A1 A2 A3 A4 A5 A6	ISO Standard sizes: A0, A1, A2, A3, A4, A5 or North American paper sizes: Letter, Legal, Tabloid/Ledger (for ledger, select landscape orientation)		
<code>background</code>		Enter a valid CSS color code.		
<code>background_image</code>		Enter the full URL.		
<code>watermark_image</code>		To turn off watermark image on the page, set value as <code>off</code>	Full URL of watermark image	
<code>watermark</code>		Watermark text value, for example: Confidential, Draft etc.		

<code>orientation</code>	(blank) P L	Landscape or portrait	P
<code>header</code>		Enter Wiki Syntax / HTML code / Plain text. Possible values: <code>Custom HTML / Wiki Syntax / text</code> , <code>2</code> , <code>{DATE j-m-Y}</code> , <code>Page 2 of {NB}</code> , <code>Left text Center Text Right Text</code> . Set header value as <code>off</code> , to turn off header from page	
<code>margin_bottom</code>	digits	Numeric value, no need to add px. For example 10	10
<code>margin_footer</code>	digits	Only applicable if footer is set. Numeric value only, no need to add px. Warning: Footer can overlap text if bottom margin is not set properly	5
<code>margin_header</code>	digits	Only applicable if header is set. Numeric value only, no need to add px. Warning: Header can overlap text if top margin is not set properly	5
<code>hyperlinks</code>	(blank) off footnote		
<code>margin_left</code>	digits	Numeric value. For example 10	10
<code>columns</code>	(blank) 2 (blank) (blank)		
<code>margin_right</code>	digits	Numeric value, no need to add px. For example 10	10
<code>margin_top</code>	digits	Numeric value, no need to add px. For example 10	10

Sample PluginPDFpage Code

```
{PDFPAGE(orientation="L" watermark="Landscape Page")} contents of the page that you want
```

impacted by different parameters than the rest of the page {PDFPAGE}

Do not try to use like this:

```
{pdfpage orientation="L"}
```
