

Plugin Real Name List

Introduced in [Tiki4](#)

Use this [wiki plugin](#) to create a list of users showing their real names and allows subsetting by Group name. The `admin` user and/or users whose login contains the string `test` can be excluded from the list shown. The list can either be in table format, or in a string. In the latter case a separator can be specified.

Parameters

Show user real names for members of a group
