

# Plugin WYSIWYG

Introduced in [Tiki9](#)

Use this [wiki plugin](#) to have a **WYSIWYG** section for part of a page. For example, you want to use WYSIWYG for a table, but keep most of the page as wiki syntax. The WYSIWYG feature (which is when you want the full page to be WYSIWYG) doesn't need to be activated.

## Parameters

Use a WYSIWYG editor to edit a section of content

Introduced in Tiki 9.

[Go to the source code](#)

Preferences required: `wikiplugin_wysiwyg`

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Content		
<code>height</code>	text	Minimum height for DIV. Default: <code>300px</code>	300px	9.0
<code>width</code>	text	Minimum width for DIV. Default: <code>100px</code>	100px	9.0
<code>use_html</code>	(blank) y n	By default, the body (content) of calls to the WYSIWYG plugin is interpreted according to the "Use Wiki syntax in WYSIWYG" ( <code>wysiwyg_htmltowiki</code> ) preference. By default, "Use HTML" is considered enabled if "Use Wiki syntax in WYSIWYG" is disabled, and vice versa. This parameter allows overriding that preference if needed.	y	14.1

Note that [HTML Purifier](#) is always on for your security when using this plugin. Invalid/insecure HTML is scrubbed. If you don't want this, you need to manually edit `lib/wiki-plugins/wikiplugin_wysiwyg.php`

## Example

When you see the page, you can mouse over any section of the page surrounded by `PluginWysiwyg` tags in the source, and the background of that section will change color (section 2 in the following screenshot). If you click on one of those sections (section 1 in the following screenshot), you open it for edition in **WYSIWYG** mode, while keeping the rest of the page still closed for edition.

Table of contents

- Section 1
- Section 2
- Section 2b

**Section 1**

**Section 2**

dsfsadf safsfdf

If you edit the wiki page as usual, you will see the wiki syntax with sections in html syntax where the html tags are enclosed by PluginWysiwyg tags.
