

References

Tiki References implements local references in Tiki. Tiki also has support for [Zotero](#) references, but they are stored externally on the Zotero server.

New in [Tiki10](#).

References consist of 2 parts. First the bibliography definition, which is (usually) listed at the bottom of the page. Second the in-page reference, which hyperlinks to a bibliography entry. A bibliography entry can be reference 0..N times in the page.

All definitions are displayed in the listing, thus displayed if used by in-page references or not.

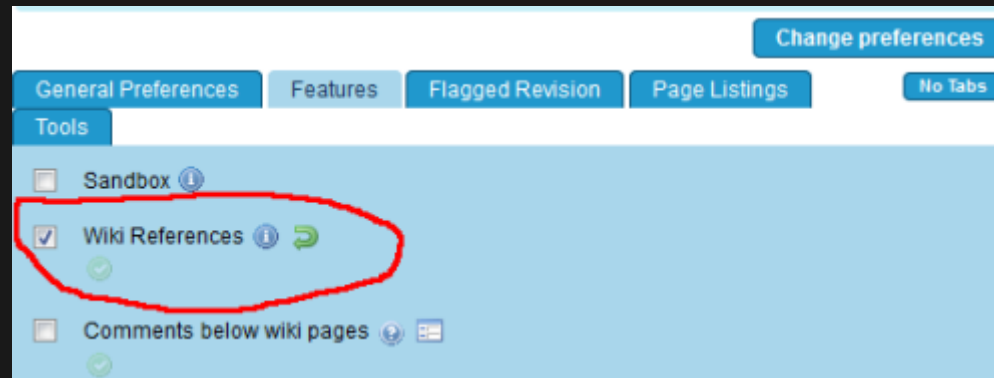

The in-page references are linked to the bibliography definitions using the "biblio_code", which must be unique per page.

It is possible to share references by using the built-in library.

Preparing to Use References

Activate the Wiki References feature

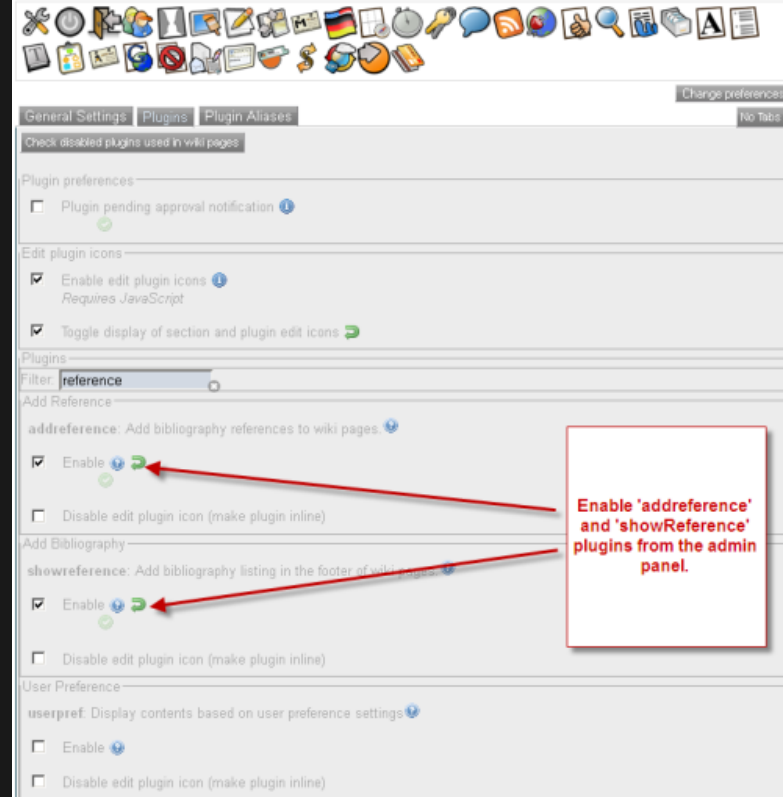

The Wiki References feature must be activated before you can use references. This is done in the "Wiki" Admin panel under the "Features" tab.

Activating Wiki References will automatically also

1. activate the plugins [PluginAddReference](#) and [PluginShowReference](#)
2. display the Add / Show Reference buttons in the editor toolbar

The plugins can be enabled manually in the "Editing and Plugins" Admin panel.

To manually configure the editor toolbar, follow the below:

1. Go to Admin → Wysiwyg page.
2. Click on 'Toolbars' button.
3. Toolbar customization page will appear
4. Follow the instructions in the screen-shot and click on 'Save'.

  Add Bibliography

Configure the permissions

Any user with permissions to edit the page can define references for the page and use them in the page. The reference permissions deal with the library access.

Users with 'tiki_p_use_reference' permission can:

- View and copy entries from references from the library.

Users with 'tiki_p_edit_reference' permission can:

- Open and use reference library admin panel.
- Add references to library
- Delete library references
- Edit library references

Using Page References

To use (or make the page references visible on the page), the reference plugins must be added. Standard reference handling uses both in-page links and a bibliography listing. The bibliography listing is typically added at the bottom of the page.

The screenshot shows the 'Edit: Test 1' page editor. At the top, there are tabs for 'Edit page', 'Categories', and 'Properties'. A callout points to the 'Properties' tab with the text 'Click on Properties tab'. Below the tabs, there is a section for 'Apply template:' with a dropdown menu set to 'none' and 'Admin Content Templates'. Below that is a 'Copyright:' section with fields for 'Title:', 'Year:', and 'Authors:'. A callout points to this section with the text 'Bibliography section in page editor'. The main area is titled 'Bibliography' and contains several elements: an 'Add Bibliography' button with a callout 'Add new reference link'; a 'References Available:' section with a list of references: 'ab', 'first', 'second', and 'test', each with a pencil icon and a red 'X' icon. A callout points to this list with the text 'Already added references'; a 'Library References:' section with a dropdown menu set to 'first' and a 'Use' button, with a callout 'Library references available for use'; and an 'Edit Library References' button with a callout 'Edit library references'.

×

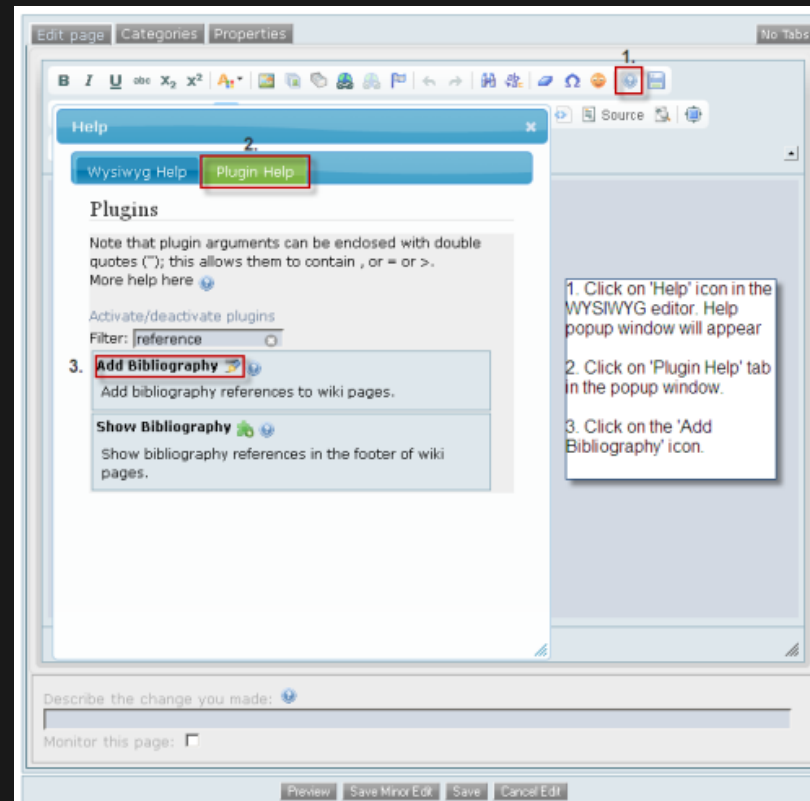

i Save page before using references

The page must be saved before it is possible to add any references to it. The reason is that the references use

the database pageId to link to the wiki page, and the pageId doesn't exist before the page is saved. Thus it is not possible to add references to a newly created page before it is saved.

Add plugins

The screenshot below shows the manual way to add the plugins. Using the shortcuts to the toolbar is easier.

Add/Edit the bibliography entries

Go to the properties tab while editing the page. There you can add/edit the bibliography entries associated with the page.

The bibliographies that are being used in the page will be highlighted with a green background.

Use

Reference added.

Edit Library References

Biblio Code: AMSA

Author:

Title: Arctic Marine Shipping Assessment R

Year: 2009

Part:

URI:

Code:

Publisher:

Location:

Style:

Enter the CSS class name to be added in the `li` tag for listing this reference.

Template:

Enter template format in which you want to display the reference details in the bibliography listing. For example: ~title~ (~year~) ~author~
All the codes must be in lower case letters separated with spaces.

Save Cancel

References are saved independently of the page. Thus if pressing "Save" to commit a new reference for a page, it is added even if the page edit itself is canceled. Similarly when deleting a reference.

There is no version handling for references. Rolling back to a previous page version will not affect the reference

Set Style

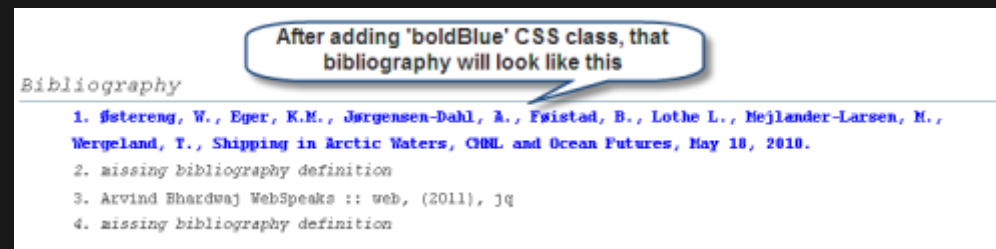

In the 'Style' field of the bibliography form, you may enter the CSS class name that will be applied to the 'li' tag of that reference while listing the references in the footer of the page. For example in the style field, if you add 'boldBlue', this CSS class will be applied to this reference in the listing and the generated HTML code will look like:

"

1. ...bibliography details...

Definition of 'blueBold' in tikiroot\styles\mystyle.css

```
.references ul li.boldBlue{  
    font-weight:bold;  
    color:#0000FF;  
}
```

After adding 'boldBlue' CSS class, that bibliography will look like this

Bibliography

1. Østereng, W., Eger, K.M., Jørgensen-Dahl, A., Fvistad, B., Lothe L., Mejlender-Larsen, M., Wergeland, T., Shipping in Arctic Waters, OBNL and Ocean Futures, May 10, 2010.
2. missing bibliography definition
3. Arvind Bhardwaj WebSpeaks :: web, (2011), 1q
4. missing bibliography definition

Set Template

In the 'Template' field of the bibliography form, you may enter the format and ordering in which you want to display the bibliography details in the footer. It specifies ordering, decoration and the location of reference parameters.

Thus: ~title~ (~year~) ~author~
Using title=Hello World, author=Somebody and year=2011
will produce: Hello World (2011) somebody

All the codes must be in lower case letters separated by spaces.

Macros available

The default template is: ~title~, ~part~, ~author~, ~location~, ~year~, ~publisher~, ~code~
If you would like the title to be hyperlinked with the URL, modify your template so that the ~title~ tag is surrounded by a html href anchor, e.g.

```
~title~
```

Note: Tiki parsing currently adds the 'tiki_', please do not add it yourself.

Using Reference Library

The library references are not linked to a specific wiki page, but are accessed from the bibliography section in the page properties tab.

The library is shared between the local users.

Users with the 'tiki_p_use_reference' permission, can view and copy references from the library to the current page.

Users with 'tiki_p_edit_reference' can maintain the library.

The biblio codes in the library (as in the pages) must be unique.

Please note: while the on-page reference creator will allow some special characters, the library editor only support characters [A-Za-z0-9] so be sure you use ONLY alphanumeric characters when creating references for use in the library.
