Tiki has support for RTL but it's not working perfectly everywhere. Please join the [community](#) to help improve this.

RTL support (BIDI) from TW 6.1

Tiki dev team has decided to improve the RTL implementation from this version and to maintain it properly from this point.

We try to keep changes into the styles/BIDI/BIDI.css file to keep things simple and compatible but an admin with RTL need on his website (Arabic, Hebrew, etc) should be aware that there are some issues that can be solved only by implementing some direction tags into the theme they use.

We'll try to update the area we have corrected so Tiki Wiki became fully rtl compatible.

Solved

Module article

CSS Menu

Login top tab (could require theme modification)

Minor text area

Wysiwyg toolbar

Underwork

Calendar

Quicktags (wiki toolbar)

Approval required

Admin text field
