

Roles

Roles is a new feature available from [Tiki 21](#) that makes [Groups Management](#) and [Permissions](#) setting easier. Think of Roles as a permissions template which you can apply to [Categories](#). It can be used on its own or in conjunction with the older [Workspace UI](#) (which needs to be upgraded to make use of Roles without requiring manual adjustments), or in conjunction with the newer [Templated Groups](#) which is also introduced in Tiki 21.

For example, if you have 4 groups:

- Science Class Teachers
- Science Class Students
- Math Class Teachers
- Math Class Students

and 2 categories:

- Science Class Handouts
- Math Class Handouts

and you want to make it such that all Teachers can edit handouts but Students can only read the handouts. Without Roles, you would need to set permissions on each of the categories and imagine if you have many other classes such as Geography or History etc... it can be a lot of work. Also, what if you wanted to change the permissions?

With Roles, you can create a "Teacher" Role group and a "Student" Role group which acts as the permissions template for all Teachers and Students regardless of what subject it is for. Instead of setting category permissions for each of the groups, you simply set which group has the role of Teachers and of Students in that group and permissions will be auto-magically mapped.

- Science Class Handouts
 - Teacher Role: Science Class Teachers
 - Student Role: Science Class Students
- Math Class Handouts
 - Teacher Role: Math Class Teachers
 - Student Role: Math Class Students

Example

Now, let us walk through how the above example is configured:
(editor's note: this example is used as part of the [Templated Groups](#) as well so take note when editing it).

1. Create Role Groups

Create two groups, one "Teachers" and one "Students". Make sure that "Role Group" checkbox is selected for both.

Click to expand

You will note that if you try and put any users into Role Groups, you will be told that Role Groups can't have members. This is by design.

Note: if you apply any Global Permissions to a Role Group, they will work for included groups such as those below the same as non-Role groups. These are Global Permissions though, not Role Permissions which are set at the Category Parent level (see below)

2. Create Groups that Include the Role

Create the following 4 groups and include the Teacher or Student Role Group as the case may be:

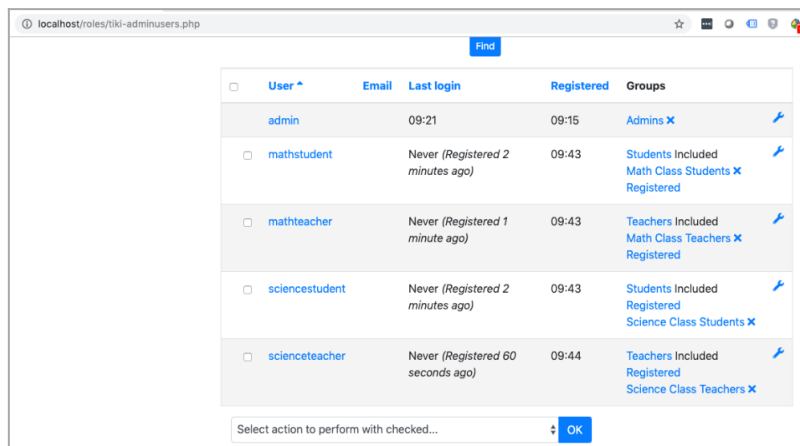

- Science Class Teachers
- Science Class Students
- Math Class Teachers
- Math Class Students

Click to expand

3. Create some test users

Create some test users and put them in these groups for testing/demo purposes.

The screenshot shows a web browser window with the URL localhost/roles/tiki-adminusers.php. It displays a table of users with columns for checkboxes, User, Email, Last login, Registered, and Groups. There are five users listed: admin, mathstudent, mathteacher, sciencestudent, and scienceteacher. Each user has a 'Groups' column with links to expand the list of groups they belong to. At the bottom, there is a 'Select action to perform with checked...' dropdown and an 'OK' button.

<input type="checkbox"/>	User	Email	Last login	Registered	Groups
<input type="checkbox"/>	admin		09:21	09:15	Admins
<input type="checkbox"/>	mathstudent		Never (Registered 2 minutes ago)	09:43	Students Included Math Class Students
<input type="checkbox"/>	mathteacher		Never (Registered 1 minute ago)	09:43	Teachers Included Math Class Teachers
<input type="checkbox"/>	sciencestudent		Never (Registered 2 minutes ago)	09:43	Students Included Registered Science Class Students
<input type="checkbox"/>	scienceteacher		Never (Registered 60 seconds ago)	09:44	Teachers Included Registered Science Class Teachers

Click to expand

4. Create categories

Create a Handouts category with the sub-categories "Science Class Handouts" and "Math Class Handouts".

For the Handouts category, make sure you select the "Apply role permissions to sub-categories" and select both "Students" and "Teachers". By doing this, any permissions that you set on the Handouts category for "Students" and "Teachers" will apply equally to the respective Students and Teachers in each of the sub-categories.

The screenshot shows the 'Edit this category: Handouts' form in the Tiki-admin_categories.php interface. The form includes fields for Parent (Top), Name (Handouts), and Description. There are checkboxes for 'Apply parent category permissions' (unchecked) and 'Apply role permissions to sub-categories' (checked). Below the checked checkbox is a dropdown menu showing 'Teachers' and 'Students' selected. There is also a dropdown for 'Automatically manage sub-categories for Templated Groups Container' set to 'None'. A 'Save' button is at the bottom.

5. Configure Role Permissions

Setup some role permissions for Handouts by editing the Permissions for the Handouts category. setting screen. For our example we will give tiki_p_edit for Teachers; and tiki_p_view for both Teachers and Students.

localhost/roles/tiki-objectpermissions.php?objectType=category&objectId=1&permType=category&objectName=Handouts

Assign permissions to this category

Click to expand

6. Create test wiki pages

Create a Science Class Handout and a Math Class Handout wiki pages and categorize them accordingly. Test with the demo users to ensure that everything is working as intended.
