

# Search Stats

If you enabled the [Search](#) feature, you can also enable the search statistics at "Admin home > Search > Search features > Search stats".

The screenshot shows the 'Search Results' settings page in Tiki Admin. It is divided into three sections: 'Search type', 'Features', and 'Permissions'. In the 'Search type' section, 'MySQL Full-Text Search' is checked. In the 'Features' section, 'Search stats' is checked and highlighted with a red circle. Other features like 'Search Bar', 'Referer Search Highlighting', and 'Parse the results' are also checked. The 'Permissions' section contains a warning message and two unchecked options: 'Ignore individual object permissions' and 'Ignore category viewing restrictions'.

Then, you can access them under "Admin > Search stats", which will lead you to "**tiki-search\_stats.php**":

The screenshot shows the 'Search stats' page. At the top, there is a 'clear stats' link and a search bar with a 'find' button. Below the search bar is a table with two columns: 'term' and 'searched'. The table contains the following data:

| term   | searched |
|--------|----------|
|        | 11828    |
| search | 5293     |
| for... | 4236     |
| wiki   | 3245     |
| page   | 2866     |
| table  | 2591     |

**This page should be edited and inserted into the Search section of the Tiki Admin Guide**
