Tiki contains an optional spellchecking ability that uses its own dictionary. When entering wiki text in specific features, Tiki can automatically identify misspelled words and offer suggestions.
The language-specific dictionary used by the spellchecker is an additional database table that can be downloaded from Sourceforge and added to your database.
Spellcheck FAQs
Q: Why does spellcheck flag all capitalized words as incorrect? A: Because it has been broken for a <i>long</i> time. See this post from 2007.
