

This feature is no longer supported or relevant because browsers now have spellchecking, and that's where it should be handled.

Using the Tiki Spellchecker

If you have permission to edit a specific page or object, and if the **Spellchecking** option for that feature is **enabled**, then Tiki will display the **Spellcheck** option when you edit a wiki page or text area:

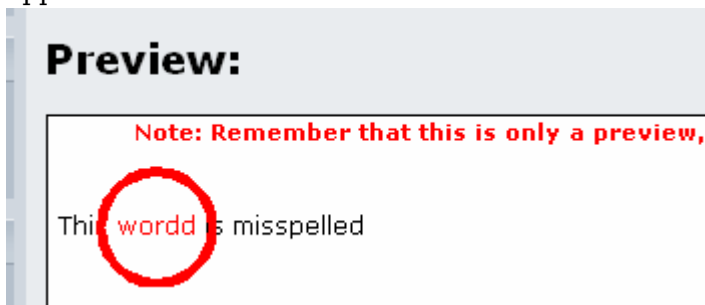

The screenshot shows the Tiki edit interface. The 'Spellcheck' checkbox is circled in red. Other visible fields include 'Summary:', 'Copyright:' (with sub-fields for Title, Year, and Authors), 'Import page:', 'Upload picture:', 'Cache' (set to '0 (no cache)'), 'License:' (Creative Commons Attribution-ShareAlike License), and 'Important:' (please only add here pages related to factual documentation, and that would fit in the structure work, use forums, irc or tw.o.). Buttons for 'preview', 'save', and 'cancel edit' are also present.

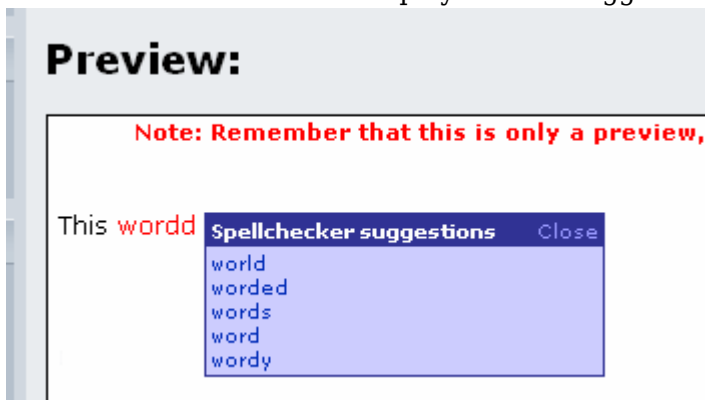

Spellcheck option when editing a wiki page.

To use the spellchecker, use this procedure:

1. Select the **Spellcheck** option.
2. Click **Preview**. Tiki will show a preview of the page with your edits. Any misspelled words will appear **red**.

3. Click a red word. Tiki will display a list of suggested corrections in a popup window.

4. Click the correct word in the popup menu. Tiki will replace the misspelled word with the selected

correction.

Note: Re-preview the page to view the correction.
