Known Bugs
This has a lot of potential but there's a lot to improve in the presentation and very raw code I just introduced.

From WebHelp:

PS: One to-do is to make the CSS of the webhelp compatible with the default style for the site, in order to do this I think that we must edit the base (.html) files in the lib/tikihelp directory and make them use elements already defined in the style instead of redefining new elements.

**DEVELOPER NOTES**

An upgrade of structures was done in 2.0. The documentation the pages linked to this page makes some mention as to what is available.

**DEVELOPERS CONTACT**

koth (or I am usually nkoth on IRC)
