

Tiki10

To check all the commits in this branch, see: <https://sourceforge.net/p/tikiwiki/code/HEAD/tree/branches/10.x/changelog.txt>

Tiki 10.x was released on 2012-12-19, and is supported until 11.1 is released

Even though it's just after a Long Term Support version and there are quite a few new features, there are relatively few major structural changes that will make upgrades difficult or cause regressions. See [Roadmap](#) and [Tiki10](#)

Since [PHP 5.2](#) started in November 2006 and [PHP 5.2.x](#) reached end of life in December 2010, which is two years before the release of [Tiki10](#), the requirements are PHP 5.3.x

If you require pre-5.3 support, you can use [Tiki9](#) which is a [Long Term Support](#) version.

1.1. Batch Upload

It is now possible to integrate very large files into the Tiki File Gallery using Batch Upload.
See [Batch Upload](#) for details.

1.2. BigBlueButton

- It is now possible for admins to delete recordings
- New explicit permission `tiki_p_bigbluebutton_view_rec` needed to view recordings:
 - `tiki_p_bigbluebutton_view_rec` is no longer implicit if `tiki_p_bigbluebutton_join` is granted

1.3. Check

1.3.1. Check Permissions

Permission Check: If Tiki installer and tiki-check.php fail, Tiki Permission Check can be used to figure out some details about filesystem permissions needed by the webserver to make those ones work.

1.3.2. Check Server

- tiki-check.php checks the server is appropriately configured for Tiki. See: [Server Check](#)

1.4. CodeÂ Review

- Many feature enhancements to take it to [Dogfood](#) level. See [Code Review](#) and code.tiki.org

1.5. Comments and Ratings

- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42557>

1.6. Cookie consent

See [#European_Cookie_compliance](#) below

1.7. Draw

- It is now possible to restrict which tools are available in SVG-edit, thus offering a simplified experience. See [Draw](#)

1.8. European Cookie compliance

See [Cookie Consent](#), to comply with "EU Privacy and Electronic Communications Regulations."

1.9. File Gallery: native indexing of .docx, .xlsx and .pptx

- Search within files
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=43228>

1.10. File Gallery: batch uploadÂ improved

See [#Batch_Upload](#)

1.11. File Gallery: Page View

New "Page View" added for images, which shows database and metadata information for each image.

1.12. ForumÂ deliberations

- Deliberation
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42583>

1.13. HTML5

In each version, we progressively take advantage of HTML5, such as footer, article, article elements and header elements.

- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42442>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42443>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42444>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42445>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42446>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42447>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42448>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42449>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42450>
- <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42451>

1.14. Kaltura

- **Kaltura** support has been revamped to be much easier to setup and **PluginKaltura** has several new parameters.
- Please see a screenshot of the new interface here: <http://tv.tiki.org/Add+a+Webcam+recording>

```
{* kaltura id="1_cv33i4xj" *}
```

1.15. Mail Queue

There is a new feature to place all notification email messages in a queue, and send all those emails periodically through a [Cron](#) job using `./sendmail.php` script.

This requires setting up mail delivery with a SMTP server instead of just sendmail, and set it to use a Queue.

See **Admin home > General > General Preferences > Mail**

Mail

Default charset for sending mail:

Mail end of line:

Mail Sender:

SMTP Server:

Authentication:

These values will be stored in plain text in the database:

Username:

Password:

Port:

Security:

Local server name:

Mail Delivery:

Email to send a test mail:

Email footer:

Click to expand

See [Mail Queue](#)

1.16. Maps

- [OpenLayers upgraded to 2.12](#)
- Added MapQuest Open tilesets
- And many many other fixes and improvements which were made for the [CartoGraf project](#), an interactive web-based mapping application to enhance learning in history and geography classes in high schools. CartoGraf is mainly based on [Maps](#), [Drawings](#), [PluginAppFrame](#) and [Trackers](#). This is a great example of how to use [profiles](#) to use a general purpose app (Tiki) to make a very specific application (CartoGraf).

1.17. Menu

See [#Structures_Drill_Down_menu](#)

1.18. Modules

- Option to load the modules from a static files (in profile YAML format like <http://profiles.tiki.org/Module+Handler>)

You can use this from admin -> profiles -> export

1.18.1. Facebook module

- NEW: [Module facebook](#) to show Facebook wall (messages and stories) of a Tiki user

1.18.2. Twitter module

- NEW: [Module twitter](#) to show public/friends Twitter timeline

1.19. Namespaces

Namespaces have been added, in order to facilitate the creation of different workspaces with common page names, for instance, among them (aka: "Introduction", "About", "Team memmbers", etc).

See [Namespaces](#)

1.20. Permission Check

See [#Check_Permissions](#)

1.21. Plugins

1.21.1. PluginSign

- New: [PluginSign](#)

1.21.2. PluginInsert

- New: [PluginInsert](#)

1.21.3. PluginProposal

- [PluginProposal](#): Added the ability to set custom weights to groups in the proposal plugin, which affects the stored attributes. This is useful for [Code Review](#)

1.21.4. PluginTrackerCalendar

It allows managing tracker items as resources in a calendar view: i.e. it uses [FullCalendar ResourceViews](#) to render the content of a tracker. The feature is not using the Tiki feature Calendar, so that you don't need to have "Calendar" feature enabled for this plugin to display data in a calendar view.

HomePage

This is a test for the feature TrackerCalendar:

See [PluginTrackerCalendar](#) and the profile to easily add a working example in your site:
http://profiles.tiki.org/Tracker_as_Calendar_10

1.21.5. PluginTrackerQueryTemplate

It allows to generate forms from a tracker. Currently only able to list data, the TrackerQueryTemplate plugin simply obtains data from a tracker and allows an editor the ability to list the tracker data as he sees fit.

See [PluginTrackerQueryTemplate](#)

1.22. References

[References](#) implements local references in Tiki. Tiki also has support for [Zotero](#) references, but they are stored externally on the Zotero server.

1.23. Screencast

This permits to capture your screen and upload to Tiki.

- Still image
- or Video with sound

This is thanks to the inclusion of the [jCapture applet](#) in Tiki.

See: [ScreenCast](#)

1.24. Search

1.24.1. Lucene Search

Search results 'Default where' parameter changed from a single select drop down selector to a multiple checkbox selection so that custom 'mixes' of content types can be included in search results

Search results can now be sorted (asc or desc) by: Relevance (default); Title; Modified date; or Visits

1.25. ServerÂ Check

See [#Check_Server](#)

1.26. Structures Drill Down menu

A Drill Down menu for structures has been added, so that when the user passes the mouse over a node in the line indicating the path to that node in the structure hierarchy, the names of all the children of that node will be displayed below the path to that structure node as links for easier navigation.

Click to expand

See [Structures Drill Down menu](#)

1.27. Themes

- It is now possible to set a different theme (and/or option) for admin pages to reduce the workload when creating custom themes and options
 - Admin -> Look & Feel -> Theme -> Admin Theme

1.28. User's Watches

There is a new tab in the user watches preferences screen, which allows the user to request whether to receive email copies or the changes made by himself/herself to the different sections of the website. If you keep these options below unchecked, you will not receive a copy of your own changes.

The screenshot shows the 'User Watches and preferences' interface. At the top, there is a title bar with the text 'User Watches and preferences' and two icons. Below the title bar is a navigation bar with buttons for 'MyTiki', 'Preferences', 'MyInfo', 'Messages', 'My Watches', and 'Action Log'. The 'My Watches' button is highlighted. Below the navigation bar is a tabbed interface with 'My watches' and 'Notification Preferences' tabs. The 'Notification Preferences' tab is active. Below the tabs is a 'Tip' box with a close button and the text 'Use this form to control notifications about objects you are watching.' Below the tip box is a section titled 'Send notification when I am the editor:' with a list of checkboxes for 'Wiki', 'Article', 'Blog', 'Tracker', 'Calendar', and 'Comment'. All checkboxes are unchecked. At the bottom of the form is an 'Apply' button.

See [User Watches](#)

1.29. Version checker

- Version checker has been revamped and now deals better with LTS versions:
 - <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42539>
 - <http://tikiwiki.svn.sourceforge.net/viewvc/tikiwiki?view=revision&revision=42535>

1.30. Wiki syntax change for center

Wiki syntax for centering has been by default changed from `::center::` to `:::center:::` for new installs but upgrades will continue to use the previous syntax.

Finally, we found a new syntax for new [namespaces](#) feature `:_:` and center will stay the same.

1.31. WorkspaceÂ UI

There an interface to manage the creation and editing of [Workspaces](#), so that batch creation of sets of Tiki objects with custom groups and associated permissions can now be handled more easily.

See [Workspace UI](#)
