

# Parameters

Parameter	Value
preference	password, email

About Tiki4.0+, we also have

Parameter	Value
preference	realName, ... (see below)

Tiki 6.0+, we also have  
have

Parameter	Value
preference	language

# Configuration

- the tracker must have a user field of type 1 that will give the user name.
- you might need to set Admin Home / Community / User Preferences Screen on (e.g. for realName)

# How to find out which preferences can be used?

(the result shown below is from a Tiki22)

```
MariaDB [xxx_tiki22]> select distinct prefName from tiki_user_preferences order by prefName;
```

```

# Note

As of Tiki 16.x, while you can use some field like country and user\_information, they show up just as text fields and don't provide a drop down.
