

User Mentions

Introduced in [Tiki20](#)

This feature converts any wiki syntax written as `@username` in all text areas to the existing actual Registered user link.

In order to *mention* users on Wiki pages etc. a Tiki admin needs to enable "Tagging users" preference under *User Features > User Account Features* on the **User Settings** ([tiki-admin.php?page=user](#)) control panel first.

Examples

Example 1

This code:

```
@luci
```

Would produce on this site:

[@luciash d' being ðŸ™](#)
