

User Mentions

Introduced in *Tiki20*

This feature converts any wiki syntax written as @username in all text areas to the existing actual Registered user link. In order to *mention* users on Wiki pages etc. a Tiki admin needs to enable "Tagging users" preference under *User Features > User Account Features* on the **User Settings** (tiki-admin.php?page=user) control panel first.

Examples

Example 1

This code:

@luci

Would produce on this site:

[@luciash d' being](#) □
