

Using Machine Learning Models

After a model has been trained, it is ready to be used to make prediction on new data. Trying to use an untrained model will result in an error.

To use a model, open its action menu and click on **Use**.

Go to model use page

Tiki will then display the model's page for prediction. This page will include input fields for you to enter new data.

The screenshot shows the 'Use machine learning model Divorce Predictor' page. It has a header with the title and '+ New' and 'Manage' links. Below the header is a description: 'Predict whether a couple will stay married or get divorced. Use this model by entering a sample information in the form below and execute a query against the trained model. This will produce results based on the chosen estimator and show you the most relevant matches or predict the result.' The form consists of five questions, each with a text input field and a 'Go' button: Q1 (input: 4), Q2 (input: 2), Q3 (input: 4), Q4 (input: 5), and Q5 (input: 2). Each question has a small example text below it.

Use model page

Fill in the fields and select the type of task you want model to perform. This will be either a probability or prediction task. Either of the tasks is supported based on the model's underlying learning algorithm. After this, click on the **Submit** button to get result.

A success message will be displayed and result will appear right after the submit button.

The screenshot shows the same 'Use machine learning model Divorce Predictor' page, but now with a green success message box at the top. The message says 'Success' and 'Success'. Below the message, the form is still visible, with the first question (Q1) having the input '4'.

Result success message

Q21
3
I'm not the one who's wrong about problems at home. (1-5) E.g. 5.

Q52
4
I wouldn't hesitate to tell my spouse about her/his inadequacy. (1-5) E.g. 4.

Q53
1
When I discuss, I remind my spouse of her/his inadequacy. (1-5) E.g. 4.

Q54
2
I'm not afraid to tell my spouse about her/his incompetence. (1-5) E.g. 1.

Type
☐ Probability (closest matches) ☒ Prediction
