

## Text box

• If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally. If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally.

This text is in a box.

This text is in a box.

If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally. If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally.

## Plain Text

If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally. If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally.

This "text" is `not` being formatted.

If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally. If the text is in a box, it will be displayed in a box. If the text is not in a box, it will be displayed normally.

~126~126~126~126~110~126~126~112~126~126~126~126~126~ produces: ~126~110~112~126~  
~126~126~126~126~47~126~126~110~126~126~112~126~126~126~ produces:  
~126~47~110~112~126~ !!! Indent Indent is formed by the combination of the ; and : characters. ; must appear at the beginning of a line and : must appear between introduction text and the indented text. The introduction text portion is useful for forming definition type indentation like Example 1 below. However the introduction text can be eliminated by simply including ;: together followed by the text as shown in Example 2. ^Example 1: ~np~;Intro Text: First example of indented text produces:

Intro Text  
    Indented text

Example 2:  
;:2nd example of indented text

    2nd example of indented text^

## Using Square Brackets

If you wish to include square brackets in your text (i.e. as regular text and not a link) simply add an additional open bracket to start. E.g.

[[this would not be a link]

Would render like this...

[this would not be a link]

## Non-breaking space

Use ~hs~ to add the HTML " " for a non-breaking space.

## Entering code

You enter code blocks by enclosing the block between `CODE ( )` and `CODE` tags (you need to put curly braces around the tags). Note this is a smarty construct, not a Wiki syntax.
