

# Wysiwyg Editor Admin

Since [Tiki2](#), Tiki includes a Wysiwyg (*What You See Is What You Get*) editor: , through the integration of [Fckeditor](#) in the Wiki feature. Since [Tiki6](#), this wysiwyg mode is powered by CKeditor, the new version family of the same engine.

It can be enabled at Admin -> General panel.

Please note that WYSIWYG doesn't work with [Edit by Section](#).

**Administration: wysiwyg**

### Wysiwyg Editor

**Tip**  
Wysiwyg means What You See Is What You Get, and is handled in Tikiwiki by [FCKeditor](#).

#### Wysiwyg Editor Features

Wysiwyg Editor is optional:	<input checked="" type="checkbox"/>
... and is displayed by default:	<input checked="" type="checkbox"/>

## Description of Wysiwyg Editor Features

Wysiwyg Editor is optional:

If disabled, the normal editor will not be available anymore.

... and is displayed by default:

If checked, it will be the default editor when creating or modifying a wiki page.

"Content is parsed like a wiki page"

means all content of the wiki page is parsed, then `__bold__` is shown as bold in parsed result, and is still displayed `__bold__` in the source of the wiki page. Then you can mix wysiwyg edition and wikistyle code.

"Content is partially parsed"

partial parsing includes:

- \* parsing of links

- \* parsing of images and generally what is included in { }

- \* parsing of wikiplugins

Toolbar skin:

It selects the theme styles for icons, colors, etc. used by Wysiwyg editor

Toolbar content:

Shows a list of features that will be loaded with the editor. For more information on these features, check the FCKEditor Documentation at <http://www.fckeditor.net/>
