

# Module Must Read

As part of the [Must Reads](#) feature, this [Module](#) requests the creation of a mustread item based on the current object.

## Usage

To use module **Must Read** in a wiki page:

```
{module module="mustread" objectField="mustreadTitle"}
```

Where: Request the creation of a mustread item based on the current object.

*Required parameters are in **bold**.*

[Go to the source code](#)

*Preferences required:* mustread\_enabled

Parameters	Accepted Values	Description	Default	Since
<b>objectField</b>		Permanent name of the field containing the object reference
