Unix Commands

Posted by [george.geller](#) Sat 20 Dec, 2003 03:36 GMT-0000 posts: 3

I wrote MultiTiki. I'm not happy with it for a couple of reasons:

1. I is too general to be useful. A newbie would NOT be able to set up multiple tikis based on the information presented.
2. I wanted to show the commands like I did for <http://tikiwiki.org/tiki-index.php?page=RecipeMultTiki> But doc.tikiwiki.org has no official format for showing Unix commands. Are all you guys hosting on Windows?
3. I linked to RecipeMultTiki in a footnote. If that link breaks, my new page will be really useless.

mose told me on IRC he was going to address 2.

I'm not sure what to do about 1. I don't know enough about hosting on Windows to write an authoritative description. If I just more-or-less copy RecipeMultTiki, that will be very verbose and only apply to Unix, maybe only RedHat Linux actually.

Guidance?

Thanks, George Geller

We have an official format for unix commands:

```
cat README
```

mose
