Page Staging and Approval

Posted by [nsbrown](#) Fri 30 May, 2008 17:17 GMT-0000 posts: 1 

I am trying to set up TikiWiki so that anyone can post or edit pages but they have to be approved.

I have enabled Wiki Page Staging and Approval and set up the categories for them. When I go to the Staging area and go into Edit, the following shows at the top: "You are editing the staging copy of the approved version of this page. Changes will be merged in after approval. The current staging copy may contain changes that have yet to be approved. View changes since last approval."

There is no approval link. What else do I need to do?

I have been going round and round with this for several days and can't find anything online that relates to it. I'm probably missing something obvious, but I'll be darned if I know what.
